About CEFoodCycle

To tackle food waste, for instance in the hospitality sector, there is a great potential for resource related to food overproduction or packaging. The overall objective of the project is the implementation of Circular Economy Hubs in the food sector in five alpine pilot regions to identify potentials for food waste and CO2 reduction. The involved actors benefit from know-how transfer, networking as well as the use of a digital, intelligent decision support system based on Life-Cycle-Assessment indicators.
